

Machine Learning Engineer Job Description

We are looking for a skilled and detail-oriented Machine Learning Engineer who will be responsible for designing, building, and deploying machine learning models into production systems. You will work closely with data scientists, software engineers, and stakeholders to create scalable and efficient AI-driven solutions.

A bachelor's degree in computer science, data science, artificial intelligence, or a related field is required. Candidates should have 2 to 5 years of experience in machine learning, software engineering, or related roles.

Machine Learning Engineer Responsibilities:

- Designing and developing machine learning models and algorithms.
- Deploying models into production environments.
- Building and maintaining scalable ML pipelines and workflows.
- Collaborating with data scientists to optimize model performance.
- Integrating ML solutions into applications and systems.
- Monitoring model performance and retraining when necessary.
- Working with large datasets and optimizing data processing.
- Ensuring system reliability, scalability, and efficiency.
- Debugging and improving existing ML systems.
- Staying updated with advancements in machine learning and AI.

Machine Learning Engineer Requirements:

- A bachelor's degree in computer science, data science, artificial intelligence, or a related field.
- 2 to 5 years of experience in machine learning or software engineering.
- Strong proficiency in Python.
- Experience with machine learning frameworks such as TensorFlow, PyTorch, or scikit-learn.
- Knowledge of data structures, algorithms, and software engineering principles.
- Experience with cloud platforms and deployment tools.
- Understanding of data pipelines and distributed systems.
- Strong problem-solving and analytical skills.
- Good communication and teamwork abilities.
- Ability to work with large-scale data and systems.
