PROFESSIONAL SUMMARY

Full-stack developer with a B.Sc. in AI & Data Science who builds complete products — from database to deployed ML model to user-facing interface. Shipped a 70+ page production website (PHP/PostgreSQL/JS) driving 1,000+ monthly visitors and 73.3% visibility uplift, and built Waza3ly, a full-stack food distribution platform with role-based auth, donor tracking, and delivery management dashboards. Uniquely positioned to integrate AI/ML features directly into web products — REST API deployment, model serving, real-time inference — without needing a separate ML team. Targeting product companies building AI-powered applications.

TECHNICAL SKILLS

Web Stack	PHP · JavaScript · HTML/CSS · Tailwind CSS · PostgreSQL · MySQL · REST APIs · Role-based auth
AI Integration	Python · Flask · FastAPI · Model serving · PyTorch · OpenCV · REST API deployment · Real-time inference
ML / Data	Scikit-learn · LightGBM · Pandas · NumPy · Feature engineering · YOLOv11/v12 · Hugging Face
Deployment	Docker · Linux · Git · Model compression · Quantization · Edge deployment
Methods	Agile · Cross-functional collaboration · Full product ownership · Independent delivery

PROJECTS

- Waza3ly — Food Distribution Platform** | PHP · Tailwind CSS · PostgreSQL · REST APIs 2024
- Full-stack platform connecting food donors, volunteers, and recipients — built with role-based authentication, donation tracking, and delivery management dashboards.
 - Designed relational schema, REST API layer, and full front-end from scratch; demonstrates end-to-end product ownership.
- Fabric Defect Detection — API-Ready CV System** | PyTorch · YOLOv11/v12 · RT-DETR · OpenCV Jun 2025
- Real-time defect detection pipeline achieving 61.3% mAP@50 and 83 FPS — designed for integration into a web QC dashboard via REST API.
 - Demonstrates ability to build ML backends that front-end applications can consume directly.
- ASR Model — Deployable Microservice** | PyTorch · Conformer · Flask · Raspberry Pi May 2025
- Compressed ASR model to 6 MB with 11.5x real-time inference — suitable for embedding into a voice-enabled web application without cloud dependency.
- Information Retrieval System** | Python · BERT · Sentence Transformers · REST 2024
- Benchmarked semantic vs. keyword search engines — the type of backend infrastructure powering modern AI-enhanced search and recommendation features.
- Credit Default Risk Model** | LightGBM · Scikit-learn 2024
- 0.91 AUC classification model — illustrates ability to expose an ML prediction as an API endpoint within a fintech or SaaS product.

EXPERIENCE

- Full-Stack Web Developer** | SISCOM Jan 2023 UAE · Remote
- Sole developer responsible for designing, building, and launching a 70+ page company website using HTML, CSS, JavaScript, and PHP.
 - Delivered 73.3% increase in online visibility and 1,000+ monthly visitors — measurable business impact from technical execution.
 - Implemented secure authentication, contact forms, performance-optimized front-end, and responsive layouts independently on schedule.

EDUCATION

B.Sc. AI & Data Science | ESLSCA University (Paris Business School)
Jul 2025 · Egypt
American High School Diploma — GPA 3.8 | Pioneers International School, Giza

CERTIFICATIONS & RECOGNITION

Cisco Networking Academy — Network Support & Security Oct 2025
EVAi AI Hackathon — Outstanding Performance Award | Coach Academy / EVA Group 2024
