

AI Product Manager Job Description

We are looking for a strategic and detail-oriented AI Product Manager who will be responsible for defining, developing, and managing AI-driven products. You will work closely with data scientists, engineers, designers, and stakeholders to translate business needs into intelligent solutions and ensure successful product delivery.

A bachelor's degree in computer science, business, data science, or a related field is required. Candidates should have 3 to 6 years of experience in product management, AI, or related roles.

AI Product Manager Responsibilities:

- Defining product vision, strategy, and roadmap for AI-driven solutions.
- Collaborating with cross-functional teams to deliver AI products.
- Translating business requirements into technical specifications.
- Prioritizing features and managing product backlogs.
- Overseeing the development and deployment of AI systems.
- Monitoring product performance and user feedback.
- Ensuring alignment between business goals and technical implementation.
- Conducting market research and identifying opportunities.
- Communicating product updates and progress to stakeholders.
- Staying updated with AI trends and product management practices.

AI Product Manager Requirements:

- A bachelor's degree in computer science, business, data science, or a related field.
- 3 to 6 years of experience in product management or AI-related roles.
- Strong understanding of AI and machine learning concepts.
- Experience working with cross-functional technical teams.
- Excellent communication and stakeholder management skills.
- Strong problem-solving and decision-making abilities.
- Familiarity with Agile or Scrum methodologies.
- Ability to translate complex technical concepts into business value.
- Experience with data-driven product development.
- Leadership and organizational skills.
