

Big Data Engineer Job Description

We are looking for a skilled Big Data Engineer who will be responsible for designing, building, and maintaining large-scale data processing systems. You will work with massive datasets and collaborate with data scientists and engineers to enable efficient data storage, processing, and analysis.

A bachelor's degree in computer science, data engineering, data science, or a related field is required. Candidates should have 2 to 5 years of experience in data engineering, big data, or related roles.

Big Data Engineer Responsibilities:

- Designing and building scalable data pipelines and architectures.
- Processing and managing large volumes of structured and unstructured data.
- Developing and optimizing data workflows for performance and reliability.
- Collaborating with data scientists to support data analysis and model development.
- Integrating data from multiple sources into centralized systems.
- Ensuring data quality, consistency, and security.
- Monitoring system performance and troubleshooting issues.
- Implementing data storage solutions such as data lakes and warehouses.
- Automating data processing and ETL pipelines.
- Staying updated with emerging big data technologies and tools.

Big Data Engineer Requirements:

- A bachelor's degree in computer science, data engineering, data science, or a related field.
- 2 to 5 years of experience in data engineering or big data technologies.
- Strong proficiency in Python, Java, or Scala.
- Experience with big data frameworks such as Hadoop or Spark.
- Knowledge of databases, data warehouses, and ETL processes.
- Familiarity with cloud platforms and distributed systems.
- Strong problem-solving and analytical skills.
- Good communication and teamwork abilities.
- Experience with data pipelines and workflow orchestration tools.
- Ability to handle large-scale data systems efficiently.
