

Data Scientist Job Description

We are looking for a skilled and analytical Data Scientist who will be responsible for collecting, analyzing, and interpreting complex data to support decision-making and build predictive solutions. You will work closely with business and technical teams to identify opportunities, develop machine learning models, and generate valuable insights from data.

A bachelor's degree in computer science, data science, artificial intelligence, statistics, or a related field is required. Candidates should have 2 to 5 years of experience in data science, machine learning, or related roles.

Data Scientist Responsibilities:

- Collecting, cleaning, and preprocessing structured and unstructured data.
- Performing exploratory data analysis to identify patterns and trends.
- Developing and evaluating machine learning and predictive models.
- Collaborating with cross-functional teams to solve data-driven problems.
- Visualizing insights through dashboards, charts, and reports.
- Selecting appropriate algorithms and features for model development.
- Validating model performance and improving accuracy.
- Documenting methodologies, experiments, and findings.
- Supporting deployment of models into production environments.
- Staying updated with advances in data science and artificial intelligence.

Data Scientist Requirements:

- A bachelor's degree in computer science, data science, artificial intelligence, statistics, or a related field.
- 2 to 5 years of experience in data science or machine learning.
- Proficiency in Python or R.
- Experience with libraries such as Pandas, NumPy, scikit-learn, TensorFlow, or PyTorch.
- Strong understanding of statistics, probability, and data analysis.
- Experience with data visualization tools such as Power BI, Tableau, or Matplotlib.
- Knowledge of SQL and database systems.
- Strong problem-solving and analytical skills.
- Good communication and teamwork abilities.
- Ability to work with large and complex datasets.
