

Database Architect Job Description

We are looking for a highly experienced and strategic database architect who, along with our engineering and IT teams, will be responsible for designing, managing, and optimizing large-scale database systems and data architecture. Duties will include but are not limited to defining database structures, ensuring scalability and performance, and aligning data solutions with business requirements. You will collaborate with developers, system architects, and stakeholders to deliver efficient and secure data systems.

A bachelor's degree in computer science, information technology, or a related field is required. Candidates should have 7 to 10+ years of experience in database administration, data engineering, or related roles.

Database Architect Responsibilities:

- Designing and defining database architecture for large-scale systems.
- Developing database strategies for scalability, performance, and reliability.
- Selecting appropriate database technologies (SQL and NoSQL) based on requirements.
- Ensuring data integrity, security, and governance across systems.
- Collaborating with development teams to design efficient data models and schemas.
- Optimizing database performance through indexing, partitioning, and query tuning.
- Leading data migration, integration, and transformation initiatives.
- Evaluating and implementing new database technologies and tools.
- Reviewing database designs and ensuring architectural consistency.
- Maintaining documentation of database architecture and technical decisions.

Database Architect Requirements:

- A bachelor's degree in computer science, information technology, or a related field.
- 7 to 10+ years of experience in database administration, data engineering, or related roles.
- Strong expertise in database systems such as MySQL, PostgreSQL, Oracle, SQL Server, or NoSQL databases.
- Advanced knowledge of database design, normalization, and data modeling techniques.
- Strong understanding of distributed databases and large-scale data systems.
- Experience with performance optimization, indexing, and partitioning strategies.
- Familiarity with cloud-based database solutions is a plus.
- Strong analytical and problem-solving skills.
- Excellent communication and technical leadership abilities.
- Ability to align data architecture with business goals.
