

Junior Computer Vision Engineer Job Description

We are looking for a motivated and detail-oriented Junior Computer Vision Engineer who will assist in developing and implementing computer vision algorithms and applications. You will work closely with senior engineers and data scientists to build models that analyze and interpret visual data such as images and videos.

A bachelor's degree in computer science, artificial intelligence, data science, or a related field is required. Candidates should have 0 to 2 years of experience in computer vision, machine learning, or related roles.

Junior Computer Vision Engineer Responsibilities:

- Assisting in developing computer vision models and algorithms.
- Working with image and video datasets for analysis and processing.
- Performing data preprocessing and annotation tasks.
- Supporting the implementation of machine learning and deep learning models.
- Collaborating with team members to understand project requirements.
- Testing and evaluating model performance.
- Writing clean and efficient code under supervision.
- Debugging and improving existing models and systems.
- Documenting processes and experimental results.
- Staying updated with basic computer vision techniques and tools.

Junior Computer Vision Engineer Requirements:

- A bachelor's degree in computer science, artificial intelligence, data science, or a related field.
- 0 to 2 years of experience in computer vision or machine learning.
- Basic proficiency in Python.
- Familiarity with libraries such as OpenCV, NumPy, or TensorFlow.
- Understanding of image processing and deep learning concepts.
- Knowledge of machine learning fundamentals.
- Strong problem-solving and analytical skills.
- Good communication and teamwork abilities.
- Willingness to learn and grow in the field.
- Interest in working with visual data and AI systems.
