

Lead FinTech Software Engineer Job Description

We are looking for a highly experienced and strategic lead FinTech software engineer who, along with our engineering and finance teams, will be responsible for leading the design, development, and delivery of advanced financial systems. Duties will include but are not limited to defining system architecture, ensuring secure and scalable transaction processing, and guiding engineering teams. You will collaborate with stakeholders, product teams, and developers to align financial technology solutions with business goals.

A bachelor's degree in computer science, software engineering, finance, or a related field is required. Candidates should have 7 to 10+ years of experience in software development, FinTech, or related roles, including leadership experience.

Lead FinTech Software Engineer Responsibilities:

- Leading the design and development of complex financial systems and platforms.
- Defining system architecture and technical strategy for FinTech solutions.
- Managing and mentoring software engineering teams.
- Ensuring security, scalability, and performance of financial applications.
- Overseeing implementation of payment systems, APIs, and financial integrations.
- Collaborating with finance and product teams to define system requirements.
- Enforcing best practices in coding, security, and system design.
- Evaluating and integrating new financial technologies and tools.
- Ensuring compliance with financial regulations and industry standards.
- Communicating technical decisions and project progress to stakeholders.

Lead FinTech Software Engineer Requirements:

- A bachelor's degree in computer science, software engineering, finance, or a related field.
- 7 to 10+ years of experience in software development, FinTech, or related roles with leadership experience.
- Strong expertise in programming languages such as Java, Python, or JavaScript.
- Advanced experience with APIs, microservices, and distributed systems.
- Strong understanding of financial systems, payment processing, and risk management.
- Knowledge of data security, encryption, and regulatory compliance (e.g., PCI DSS).
- Experience with databases and SQL or NoSQL systems.
- Strong analytical and problem-solving skills.
- Excellent leadership, communication, and decision-making abilities.
- Ability to align technical solutions with business objectives.
