

Lead Full-Stack Developer Job Description

We are looking for a highly experienced and strategic lead full-stack developer who, along with our engineering team, will be responsible for leading the design, development, and delivery of complex full-stack web applications. Duties will include but are not limited to defining technical architecture, guiding development teams, and ensuring scalable, secure, and high-performance systems. You will collaborate with stakeholders, designers, and product managers to align technical solutions with business goals.

A bachelor's degree in computer science, software engineering, or a related field is required. Candidates should have 7 to 10+ years of experience in full-stack or web development, including leadership responsibilities.

Lead Full-Stack Developer Responsibilities:

- Leading the design, development, and deployment of complex full-stack applications.
- Defining system architecture for both front-end and back-end components.
- Managing and mentoring full-stack development teams.
- Ensuring code quality, best practices, and adherence to development standards.
- Collaborating with stakeholders and product teams to define requirements and timelines.
- Overseeing the full software development lifecycle from planning to deployment.
- Driving performance optimization, scalability, and security of applications.
- Coordinating cross-functional teams and improving development workflows.
- Evaluating and integrating new technologies, tools, and frameworks.
- Troubleshooting and resolving complex system and application issues.

Lead Full-Stack Developer Requirements:

- A bachelor's degree in computer science, software engineering, or a related field.
- 7 to 10+ years of experience in full-stack or web development with leadership experience.
- Strong expertise in programming languages such as JavaScript, Python, or Java.
- Advanced experience with front-end technologies such as HTML, CSS, JavaScript, and frameworks like React, Angular, or Vue.js.
- Strong experience with back-end frameworks such as Node.js, Django, or Spring.
- Strong understanding of databases, SQL, and NoSQL systems.
- Experience with RESTful APIs and web services.
- Proficiency with version control systems such as Git.
- Knowledge of system design, scalability, and performance optimization.
- Excellent leadership, communication, and decision-making skills.
- Strong problem-solving and analytical thinking abilities.
