

Lead Machine Learning Engineer Job Description

We are looking for an experienced and strategic Lead Machine Learning Engineer who will be responsible for leading the development, deployment, and optimization of machine learning systems. You will define technical direction, manage a team of engineers, and collaborate with stakeholders to deliver scalable and high-impact AI solutions.

A bachelor's degree in computer science, data science, artificial intelligence, or a related field is required. Candidates should have 6+ years of experience in machine learning, software engineering, or related roles, including leadership experience.

Lead Machine Learning Engineer Responsibilities:

- Leading the design and development of machine learning models and systems.
- Defining ML architecture and technical strategies for scalable solutions.
- Managing and mentoring a team of machine learning engineers.
- Overseeing the deployment and monitoring of ML models in production.
- Collaborating with data scientists and stakeholders to align solutions with business goals.
- Building and optimizing large-scale ML pipelines and workflows.
- Ensuring model performance, reliability, and scalability.
- Reviewing code, models, and system designs to enforce best practices.
- Driving innovation and adoption of new AI technologies.
- Staying updated with emerging trends in machine learning and AI.

Lead Machine Learning Engineer Requirements:

- A bachelor's degree in computer science, data science, artificial intelligence, or a related field.
- 6+ years of experience in machine learning or software engineering.
- Proven experience in leading teams or managing ML projects.
- Strong proficiency in Python and software engineering principles.
- Expertise in machine learning frameworks such as TensorFlow, PyTorch, or scikit-learn.
- Strong understanding of system design, data pipelines, and scalability.
- Experience with cloud platforms and ML deployment tools.
- Excellent leadership, communication, and problem-solving skills.
- Ability to manage complex systems and drive technical decisions.
- Strong focus on delivering high-quality and production-ready solutions.
