

Lead Robotics Engineer Job Description

We are looking for an experienced and strategic Lead Robotics Engineer who will be responsible for leading the design, development, and deployment of advanced robotic systems. You will define technical direction, manage engineering teams, and collaborate with stakeholders to deliver scalable and high-performance robotics solutions.

A bachelor's degree in robotics, computer engineering, electrical engineering, mechanical engineering, or a related field is required. Candidates should have 6+ years of experience in robotics, automation, or related roles, including leadership experience.

Lead Robotics Engineer Responsibilities:

- Leading the design and development of robotic systems and architectures.
- Defining technical strategies and system architectures for robotics applications.
- Managing and mentoring a team of robotics engineers.
- Overseeing system integration, testing, and deployment.
- Collaborating with cross-functional teams to align solutions with project goals.
- Developing advanced control, perception, and motion planning systems.
- Ensuring system performance, reliability, and safety standards.
- Reviewing code, designs, and engineering practices to enforce best practices.
- Driving innovation and adoption of new robotics technologies.
- Staying updated with emerging trends in robotics and automation.

Lead Robotics Engineer Requirements:

- A bachelor's degree in robotics, computer engineering, electrical engineering, mechanical engineering, or a related field.
- 6+ years of experience in robotics or automation.
- Proven experience in leading teams or managing robotics projects.
- Strong proficiency in Python or C++.
- Expertise in robotics frameworks such as ROS (Robot Operating System).
- Advanced knowledge of control systems, kinematics, and perception.
- Experience with embedded systems and hardware integration.
- Strong understanding of system design and scalability.
- Excellent leadership, communication, and problem-solving skills.
- Ability to manage complex systems and drive technical decisions.
