

Media Systems Architect Job Description

We are looking for an experienced and visionary Media Systems Architect who will be responsible for designing and overseeing the architecture of large-scale media systems and infrastructure. You will define system design strategies, ensure scalability and performance, and collaborate with cross-functional teams to deliver robust and efficient media solutions.

A bachelor's degree in computer science, software engineering, multimedia systems, or a related field is preferred. Candidates should have 6+ years of experience in media systems, software engineering, or related roles, including architectural or leadership experience.

Media Systems Architect Responsibilities:

- Designing and defining the architecture of media processing and delivery systems.
- Leading system design decisions for scalability, performance, and reliability.
- Developing high-level system architectures and technical strategies.
- Collaborating with engineering, design, and content teams to align system requirements.
- Overseeing media pipelines, workflows, and infrastructure.
- Ensuring efficient streaming, encoding, and content delivery solutions.
- Evaluating and selecting technologies, tools, and frameworks.
- Identifying and resolving complex architectural and system challenges.
- Ensuring security, scalability, and maintainability of systems.
- Staying updated with emerging technologies and industry best practices.

Media Systems Architect Requirements:

- A bachelor's degree in computer science, software engineering, multimedia systems, or a related field (preferred).
- 6+ years of experience in media systems or software engineering.
- Proven experience in system architecture and large-scale system design.
- Strong expertise in media processing, streaming, and content delivery.
- Experience with multimedia frameworks such as FFmpeg or GStreamer.
- Knowledge of networking, CDNs, and distributed systems.
- Proficiency in programming languages such as Python, C++, or Java.
- Experience with cloud platforms and scalable infrastructure.
- Excellent problem-solving, analytical, and decision-making skills.
- Strong leadership, communication, and organizational abilities.
