

Predictive Modeler Job Description

We are looking for a skilled and analytical Predictive Modeler who will be responsible for developing statistical and machine learning models to forecast trends and support decision-making. You will work with large datasets to identify patterns, build predictive models, and deliver insights that drive business strategies.

A bachelor's degree in computer science, data science, statistics, mathematics, or a related field is required. Candidates should have 2 to 5 years of experience in predictive modeling, data science, or related roles.

Predictive Modeler Responsibilities:

- Developing predictive models using statistical and machine learning techniques.
- Analyzing large datasets to identify patterns and trends.
- Performing feature engineering and data preprocessing.
- Evaluating and improving model performance and accuracy.
- Collaborating with stakeholders to understand business problems.
- Translating business requirements into predictive solutions.
- Visualizing model results and insights.
- Documenting methodologies, models, and findings.
- Working with data pipelines and ensuring data quality.
- Staying updated with advancements in predictive analytics and AI.

Predictive Modeler Requirements:

- A bachelor's degree in computer science, data science, statistics, mathematics, or a related field.
- 2 to 5 years of experience in predictive modeling or data science.
- Strong proficiency in Python or R.
- Experience with machine learning libraries such as scikit-learn, TensorFlow, or PyTorch.
- Strong understanding of statistics, probability, and predictive modeling techniques.
- Experience with data visualization tools.
- Knowledge of SQL and data manipulation.
- Strong problem-solving and analytical skills.
- Good communication and teamwork abilities.
- Ability to work with large and complex datasets.
