

# Quality Assurance (QA) Manager Job Description

We are looking for a highly experienced and strategic QA manager who, along with our engineering and product teams, will be responsible for managing quality assurance operations and ensuring the delivery of high-quality software products. Duties will include but are not limited to defining QA strategies, overseeing testing processes, managing QA teams, and aligning quality initiatives with organizational goals. You will collaborate with stakeholders, developers, and product managers to drive continuous improvement in software quality.

A bachelor's degree in computer science, software engineering, or a related field is required. Candidates should have 8 to 12+ years of experience in software testing or quality assurance, including management experience.

## Quality Assurance (QA) Manager Responsibilities:

- Managing QA teams and overseeing quality assurance operations across multiple projects.
- Defining and implementing QA strategies, standards, and policies.
- Ensuring software quality, performance, and reliability across products.
- Collaborating with development and product teams to align quality goals with business objectives.
- Overseeing test planning, execution, and reporting processes.
- Driving automation strategies and improving testing efficiency.
- Monitoring quality metrics, defect trends, and risk areas.
- Managing resource allocation and team performance.
- Mentoring QA leads and engineers to support team growth.
- Communicating quality status, risks, and improvements to senior stakeholders.

## Quality Assurance (QA) Manager Requirements:

- A bachelor's degree in computer science, software engineering, or a related field.
- 8 to 12+ years of experience in software testing or quality assurance with management experience.
- Strong expertise in QA methodologies, tools, and frameworks.
- Experience with automated testing tools such as Selenium, Cypress, or Playwright.
- Proficiency in programming or scripting languages such as Python, Java, or JavaScript.
- Strong understanding of SDLC, Agile, and DevOps practices.
- Experience with performance and load testing tools is a plus.
- Familiarity with bug tracking tools such as Jira.
- Excellent leadership, communication, and decision-making skills.
- Strong analytical and problem-solving abilities.
- Ability to align QA strategies with business goals.
