

Security Engineer Job Description

We are looking for a skilled and proactive security engineer who, along with our engineering and IT teams, will be responsible for designing, implementing, and maintaining security systems and controls. Duties will include but are not limited to securing applications, networks, and infrastructure, identifying vulnerabilities, and ensuring compliance with security standards. You will collaborate with developers, DevOps teams, and stakeholders to build secure and resilient systems.

A bachelor's degree in computer science, information security, information technology, or a related field is required. Candidates should have 2 to 5 years of experience in cybersecurity, security engineering, or related roles.

Security Engineer Responsibilities:

- Designing and implementing security systems and controls for applications and infrastructure.
- Identifying and mitigating security vulnerabilities in systems and networks.
- Performing security testing, including penetration testing and code reviews.
- Implementing secure coding practices and security best practices.
- Managing firewalls, intrusion detection/prevention systems, and endpoint protection.
- Collaborating with DevOps teams to integrate security into CI/CD pipelines (DevSecOps).
- Monitoring systems for security issues and responding to incidents.
- Ensuring compliance with security policies, standards, and regulations.
- Automating security processes and tools where applicable.
- Documenting security architectures and procedures.

Security Engineer Requirements:

- A bachelor's degree in computer science, information security, information technology, or a related field.
- 2 to 5 years of experience in cybersecurity, security engineering, or related roles.
- Strong knowledge of network security, firewalls, and intrusion detection/prevention systems.
- Experience with security tools such as SIEM platforms, vulnerability scanners, and endpoint protection tools.
- Understanding of secure coding practices and application security.
- Familiarity with scripting or programming languages such as Python, Bash, or Java.
- Knowledge of cloud security practices is a plus.
- Familiarity with DevSecOps principles and CI/CD pipelines.
- Strong problem-solving and analytical skills.
- Good communication and teamwork abilities.
