

Senior Computer Vision Engineer Job Description

We are looking for a highly skilled Senior Computer Vision Engineer who will be responsible for designing, developing, and optimizing advanced computer vision systems. You will work on complex visual data problems, contribute to system architecture, and collaborate with cross-functional teams to deliver scalable AI solutions.

A bachelor's degree in computer science, artificial intelligence, data science, or a related field is required. Candidates should have 4 to 7 years of experience in computer vision, machine learning, or related roles.

Senior Computer Vision Engineer Responsibilities:

- Designing and implementing advanced computer vision algorithms and models.
- Developing deep learning solutions for image and video analysis.
- Working with large-scale visual datasets and optimizing data pipelines.
- Collaborating with engineers and data scientists to integrate vision systems.
- Improving model accuracy, efficiency, and scalability.
- Deploying and monitoring models in production environments.
- Debugging and optimizing complex vision systems.
- Contributing to system architecture and technical decisions.
- Mentoring junior engineers and supporting team growth.
- Staying updated with the latest advancements in computer vision and AI.

Senior Computer Vision Engineer Requirements:

- A bachelor's degree in computer science, artificial intelligence, data science, or a related field.
- 4 to 7 years of experience in computer vision or machine learning.
- Strong proficiency in Python.
- Experience with frameworks such as OpenCV, TensorFlow, or PyTorch.
- Advanced understanding of deep learning, neural networks, and image processing.
- Experience with model deployment and scalable systems.
- Strong problem-solving and analytical skills.
- Excellent communication and teamwork abilities.
- Leadership and mentoring skills.
- Ability to work on complex and large-scale visual data problems.
