

Senior DevOps Engineer Job Description

We are looking for an experienced and highly skilled senior DevOps engineer who, along with our engineering and operations teams, will be responsible for designing, implementing, and optimizing advanced infrastructure and deployment pipelines. Duties will include but are not limited to leading DevOps initiatives, improving system reliability, and ensuring scalable and secure infrastructure solutions. You will collaborate with developers, system administrators, and stakeholders to enhance system performance and streamline development workflows.

A bachelor's degree in computer science, information technology, or a related field is required. Candidates should have 5 to 8+ years of experience in DevOps, system administration, or related roles.

Senior DevOps Engineer Responsibilities:

- Designing, implementing, and maintaining advanced CI/CD pipelines.
- Leading infrastructure automation using tools such as Terraform or Ansible.
- Managing and optimizing cloud infrastructure on platforms such as AWS, Azure, or Google Cloud.
- Ensuring system scalability, reliability, and security.
- Monitoring system performance and proactively resolving issues.
- Collaborating with development teams to improve deployment processes.
- Managing containerization technologies such as Docker and orchestration tools like Kubernetes.
- Implementing DevOps best practices and improving system workflows.
- Troubleshooting complex system and deployment issues.
- Mentoring junior DevOps engineers and guiding technical decisions.

Senior DevOps Engineer Requirements:

- A bachelor's degree in computer science, information technology, or a related field.
- 5 to 8+ years of experience in DevOps, system administration, or related roles.
- Strong expertise in CI/CD tools such as Jenkins, GitHub Actions, or GitLab CI.
- Advanced experience with cloud platforms such as AWS, Azure, or Google Cloud.
- Strong knowledge of infrastructure-as-code tools such as Terraform or Ansible.
- Experience with containerization tools such as Docker and Kubernetes.
- Proficiency in scripting languages such as Bash or Python.
- Familiarity with version control systems such as Git.
- Strong understanding of networking, monitoring, and security practices.
- Excellent problem-solving and analytical thinking skills.
- Strong communication and teamwork abilities.
