

Senior FinTech Software Engineer Job Description

We are looking for an experienced and highly skilled senior FinTech software engineer who, along with our engineering and finance teams, will be responsible for designing, developing, and optimizing advanced financial systems and applications. Duties will include but are not limited to leading system design, ensuring secure and scalable transaction processing, and implementing high-performance financial solutions. You will collaborate with cross-functional teams to deliver reliable and compliant FinTech products.

A bachelor's degree in computer science, software engineering, finance, or a related field is required. Candidates should have 5 to 8+ years of experience in software development, FinTech, or related roles.

Senior FinTech Software Engineer Responsibilities:

- Designing and developing complex financial software systems and applications.
- Leading the implementation of secure payment systems and financial APIs.
- Ensuring high-performance and scalable transaction processing systems.
- Implementing advanced security, encryption, and fraud detection mechanisms.
- Collaborating with finance teams to align technical solutions with business requirements.
- Optimizing system performance, reliability, and scalability.
- Reviewing code and enforcing best practices and standards.
- Mentoring junior developers and guiding technical decisions.
- Ensuring compliance with financial regulations and security standards.
- Troubleshooting and resolving complex system issues.

Senior FinTech Software Engineer Requirements:

- A bachelor's degree in computer science, software engineering, finance, or a related field.
- 5 to 8+ years of experience in software development, FinTech, or related roles.
- Strong expertise in programming languages such as Java, Python, or JavaScript.
- Advanced experience with APIs, microservices, and distributed systems.
- Strong understanding of financial systems, payment processing, and risk management.
- Knowledge of data security, encryption, and regulatory compliance (e.g., PCI DSS).
- Experience with databases and SQL or NoSQL systems.
- Strong analytical and problem-solving skills.
- Excellent communication and teamwork abilities.
- Ability to lead projects and make architectural decisions.
