

Senior Predictive Modeler Job Description

We are looking for a highly skilled Senior Predictive Modeler who will be responsible for designing, developing, and optimizing advanced predictive models. You will work on complex datasets, lead modeling initiatives, and collaborate with stakeholders to deliver accurate and impactful forecasting solutions.

A bachelor's degree in computer science, data science, statistics, mathematics, or a related field is required. Candidates should have 4 to 7 years of experience in predictive modeling, data science, or related roles.

Senior Predictive Modeler Responsibilities:

- Designing and implementing advanced predictive models using statistical and machine learning techniques.
- Analyzing large and complex datasets to identify patterns and trends.
- Leading feature engineering and data preprocessing processes.
- Evaluating, tuning, and improving model performance.
- Collaborating with stakeholders to translate business needs into predictive solutions.
- Developing forecasting models and risk analysis systems.
- Visualizing and communicating model insights and results.
- Ensuring data quality and integrity across modeling processes.
- Mentoring junior team members and supporting team development.
- Staying updated with advancements in predictive analytics and AI.

Senior Predictive Modeler Requirements:

- A bachelor's degree in computer science, data science, statistics, mathematics, or a related field.
- 4 to 7 years of experience in predictive modeling or data science.
- Strong proficiency in Python or R.
- Experience with machine learning frameworks such as scikit-learn, TensorFlow, or PyTorch.
- Advanced understanding of statistics, probability, and predictive modeling techniques.
- Experience with data visualization tools.
- Strong knowledge of SQL and data manipulation.
- Strong problem-solving and analytical skills.
- Excellent communication and teamwork abilities.
- Leadership and mentoring capabilities.
