

Senior Robotics Engineer Job Description

We are looking for a highly skilled Senior Robotics Engineer who will be responsible for designing, developing, and optimizing advanced robotic systems. You will work on complex automation solutions, contribute to system architecture, and collaborate with multidisciplinary teams to deliver reliable and scalable robotics applications.

A bachelor's degree in robotics, computer engineering, electrical engineering, mechanical engineering, or a related field is required. Candidates should have 4 to 7 years of experience in robotics, automation, or related roles.

Senior Robotics Engineer Responsibilities:

- Designing and implementing advanced robotic systems and algorithms.
- Developing control systems, motion planning, and perception algorithms.
- Integrating sensors, actuators, and embedded systems.
- Collaborating with software and hardware teams to build robotic solutions.
- Optimizing system performance, accuracy, and reliability.
- Testing, debugging, and improving robotic applications.
- Contributing to system architecture and technical decision-making.
- Ensuring safety, compliance, and engineering standards.
- Mentoring junior engineers and supporting team development.
- Staying updated with advancements in robotics and automation.

Senior Robotics Engineer Requirements:

- A bachelor's degree in robotics, computer engineering, electrical engineering, mechanical engineering, or a related field.
- 4 to 7 years of experience in robotics or automation.
- Strong proficiency in Python or C++.
- Experience with robotics frameworks such as ROS (Robot Operating System).
- Advanced knowledge of control systems, kinematics, and perception.
- Experience with embedded systems and hardware integration.
- Strong problem-solving and analytical skills.
- Excellent communication and teamwork abilities.
- Leadership and mentoring skills.
- Experience with simulation and real-world robotic systems.
