

Senior Security Analyst Job Description

We are looking for an experienced and highly skilled senior security analyst who, along with our IT and engineering teams, will be responsible for monitoring, analyzing, and improving the security posture of systems and networks. Duties will include but are not limited to leading incident response efforts, identifying advanced threats, and implementing robust security measures. You will collaborate with developers, system administrators, and stakeholders to ensure a secure and resilient infrastructure.

A bachelor's degree in computer science, information security, information technology, or a related field is required. Candidates should have 4 to 7+ years of experience in cybersecurity or related roles.

Senior Security Analyst Responsibilities:

- Monitoring systems and networks for advanced security threats and vulnerabilities.
- Leading incident response and investigation activities.
- Conducting in-depth security assessments, audits, and vulnerability analysis.
- Implementing and managing advanced security controls and solutions.
- Analyzing logs, alerts, and threat intelligence data to identify risks.
- Collaborating with IT and development teams to strengthen system security.
- Ensuring compliance with security standards, policies, and regulations.
- Developing and maintaining security policies and procedures.
- Supporting penetration testing and advanced risk assessment initiatives.
- Mentoring junior security analysts and guiding best practices.

Senior Security Analyst Requirements:

- A bachelor's degree in computer science, information security, information technology, or a related field.
- 4 to 7+ years of experience in cybersecurity or related roles.
- Strong knowledge of network security, firewalls, intrusion detection/prevention systems.
- Experience with security tools such as SIEM platforms, vulnerability scanners, and endpoint protection tools.
- Understanding of security frameworks and compliance standards (e.g., ISO 27001, NIST).
- Experience with threat analysis and incident response.
- Familiarity with scripting or programming languages such as Python or Bash.
- Strong analytical and problem-solving skills.
- Excellent communication and teamwork abilities.
- Ability to lead security initiatives and make informed decisions.
