

Software Architect Job Description

We are looking for a highly experienced and visionary software architect who, along with our engineering team, will be responsible for designing and overseeing the architecture of complex software systems. Duties will include but are not limited to defining system structures, ensuring scalability and performance, and guiding technical decisions across projects. You will collaborate with stakeholders, engineers, and product teams to ensure that software solutions align with both technical and business requirements.

A bachelor's degree in computer science, software engineering, or a related field is required. Candidates should have 7 to 10+ years of experience in software engineering, with strong expertise in system design and architecture.

Software Architect Responsibilities:

- Designing and defining the architecture of complex and scalable software systems.
- Making high-level technical decisions and establishing system standards.
- Collaborating with development teams to ensure architectural consistency and best practices.
- Evaluating and selecting appropriate technologies, frameworks, and tools.
- Ensuring system scalability, performance, security, and reliability.
- Reviewing system designs and providing technical guidance to engineering teams.
- Working closely with stakeholders to translate business requirements into technical solutions.
- Identifying and mitigating technical risks.
- Guiding the integration of systems, APIs, and third-party services.
- Maintaining documentation of architecture designs and decisions.

Software Architect Requirements:

- A bachelor's degree in computer science, software engineering, or a related field.
- 7 to 10+ years of experience in software engineering with a focus on system architecture.
- Strong expertise in programming languages such as Python, Java, or C++.
- Advanced knowledge of system design, distributed systems, and scalable architectures.
- Experience with cloud platforms and modern architecture patterns (e.g., microservices).
- Proficiency with version control systems such as Git.
- Strong understanding of databases, SQL, and system optimization.
- Experience with software development methodologies such as Agile or Scrum.
- Excellent problem-solving and analytical thinking skills.
- Strong communication and technical leadership skills.
- Ability to align technical architecture with business objectives.
