

Software Development Manager Job Description

We are looking for an experienced and results-driven software development manager who, along with our engineering leadership team, will be responsible for overseeing software development projects and managing engineering teams. Duties will include but are not limited to planning, coordinating, and supervising software development activities, ensuring high-quality deliverables, and aligning technical solutions with business goals. You will work closely with stakeholders, product managers, and cross-functional teams to drive project success and team performance.

A bachelor's degree in computer science, software engineering, or a related field is required. Candidates should have 6 to 10+ years of experience in software development, including team leadership and project management experience.

Software Development Manager Responsibilities:

- Managing and leading software development teams to deliver high-quality products.
- Planning, organizing, and overseeing the software development lifecycle.
- Collaborating with stakeholders and product managers to define project requirements and timelines.
- Ensuring adherence to coding standards, best practices, and development methodologies.
- Monitoring team performance and providing mentorship and guidance.
- Managing project schedules, resources, and risks.
- Driving continuous improvement in development processes and team productivity.
- Coordinating cross-functional teams to ensure seamless project execution.
- Overseeing testing, deployment, and maintenance of software systems.
- Communicating project progress, risks, and outcomes to stakeholders.

Software Development Manager Requirements:

- A bachelor's degree in computer science, software engineering, or a related field.
- 6 to 10+ years of experience in software development with leadership responsibilities.
- Strong understanding of software development processes and lifecycle management.
- Experience managing teams and delivering complex software projects.
- Proficiency in programming languages such as Python, Java, or C++.
- Experience with Agile, Scrum, or other development methodologies.
- Familiarity with version control systems such as Git.
- Strong knowledge of system design and architecture.
- Excellent leadership, communication, and organizational skills.
- Strong problem-solving and decision-making abilities.
- Ability to manage multiple projects and priorities effectively.
