

AI Research Scientist Job Description

We are looking for a highly analytical and innovative AI Research Scientist who will be responsible for conducting advanced research in artificial intelligence and developing new algorithms and models. You will work on cutting-edge problems, contribute to scientific advancements, and collaborate with engineering teams to translate research into practical applications.

A bachelor's degree in computer science, artificial intelligence, data science, or a related field is required. A master's or PhD is highly preferred. Candidates should have 3 to 6 years of experience in AI research, machine learning, or related roles.

AI Research Scientist Responsibilities:

- Conducting research in machine learning, deep learning, and AI methodologies.
- Developing novel algorithms and improving existing models.
- Publishing research findings in conferences and journals.
- Experimenting with large datasets and evaluating model performance.
- Collaborating with engineers to implement research into production systems.
- Staying updated with the latest academic and industry advancements.
- Designing experiments and validating hypotheses.
- Contributing to open-source projects and research communities.
- Documenting research processes and results.
- Presenting findings to technical and non-technical audiences.

AI Research Scientist Requirements:

- A bachelor's degree in computer science, artificial intelligence, data science, or a related field (Master's or PhD preferred).
- 3 to 6 years of experience in AI research or machine learning.
- Strong proficiency in Python and scientific computing libraries.
- Experience with machine learning frameworks such as TensorFlow or PyTorch.
- Strong understanding of mathematics, statistics, and algorithms.
- Experience with research methodologies and experimentation.
- Familiarity with academic publishing and research writing.
- Strong problem-solving and analytical thinking skills.
- Excellent communication and collaboration abilities.
- Passion for innovation and advancing AI technologies.
