

DevOps Engineer Job Description

We are looking for a skilled and proactive DevOps engineer who, along with our engineering and operations teams, will be responsible for building, maintaining, and optimizing development and deployment pipelines. Duties will include but are not limited to automating workflows, managing infrastructure, and ensuring continuous integration and delivery of software systems. You will collaborate closely with developers, system administrators, and stakeholders to improve system reliability and efficiency.

A bachelor's degree in computer science, information technology, or a related field is required. Candidates should have 2 to 5 years of experience in DevOps, system administration, or related roles.

DevOps Engineer Responsibilities:

- Designing, implementing, and maintaining CI/CD pipelines.
- Automating infrastructure provisioning and configuration using tools such as Terraform or Ansible.
- Managing cloud infrastructure on platforms such as AWS, Azure, or Google Cloud.
- Monitoring system performance and ensuring high availability and reliability.
- Collaborating with development teams to streamline deployment processes.
- Managing containerization technologies such as Docker and orchestration tools like Kubernetes.
- Troubleshooting and resolving system and deployment issues.
- Implementing security best practices in infrastructure and deployment processes.
- Maintaining system documentation and deployment procedures.
- Continuously improving system performance, scalability, and efficiency.

DevOps Engineer Requirements:

- A bachelor's degree in computer science, information technology, or a related field.
- 2 to 5 years of experience in DevOps, system administration, or related roles.
- Strong knowledge of CI/CD tools such as Jenkins, GitHub Actions, or GitLab CI.
- Experience with cloud platforms such as AWS, Azure, or Google Cloud.
- Familiarity with infrastructure-as-code tools such as Terraform or Ansible.
- Experience with containerization tools such as Docker and Kubernetes.
- Knowledge of scripting languages such as Bash or Python.
- Familiarity with version control systems such as Git.
- Understanding of networking, system monitoring, and security practices.
- Strong problem-solving and analytical skills.
- Good communication and teamwork skills.
