

Junior NLP Engineer Job Description

We are looking for a motivated and detail-oriented Junior NLP Engineer who will assist in developing and implementing natural language processing models and applications. You will work closely with senior engineers and data scientists to build systems that analyze and understand human language.

A bachelor's degree in computer science, artificial intelligence, data science, or a related field is required. Candidates should have 0 to 2 years of experience in NLP, machine learning, or related roles.

Junior NLP Engineer Responsibilities:

- Assisting in developing NLP models and language processing systems.
- Working with text datasets for preprocessing, cleaning, and analysis.
- Supporting implementation of machine learning and deep learning models for NLP tasks.
- Collaborating with team members to understand project requirements.
- Testing and evaluating NLP model performance.
- Writing clean and efficient code under supervision.
- Debugging and improving existing NLP systems.
- Documenting processes and experimental results.
- Learning and applying best practices in NLP and AI.
- Staying updated with emerging NLP techniques and tools.

Junior NLP Engineer Requirements:

- A bachelor's degree in computer science, artificial intelligence, data science, or a related field.
- 0 to 2 years of experience in NLP or machine learning.
- Basic proficiency in Python.
- Familiarity with NLP libraries such as NLTK, spaCy, or Hugging Face Transformers.
- Understanding of text processing and machine learning fundamentals.
- Knowledge of deep learning basics is a plus.
- Strong problem-solving and analytical skills.
- Good communication and teamwork abilities.
- Willingness to learn and grow in the field.
- Interest in language processing and AI systems.
