

Lead Blockchain Developer Job Description

We are looking for a highly experienced and strategic lead blockchain developer who, along with our engineering team, will be responsible for leading the design, development, and deployment of advanced blockchain systems and decentralized applications. Duties will include but are not limited to defining blockchain architecture, ensuring system security and scalability, and guiding development teams. You will collaborate with stakeholders, product teams, and engineers to align blockchain solutions with business objectives.

A bachelor's degree in computer science, software engineering, or a related field is required. Candidates should have 6 to 10+ years of experience in blockchain development or related roles, including leadership experience.

Lead Blockchain Developer Responsibilities:

- Leading the design and development of blockchain applications and decentralized systems.
- Defining blockchain architecture and technical strategy.
- Managing and mentoring blockchain development teams.
- Ensuring security, scalability, and performance of blockchain solutions.
- Overseeing smart contract development and deployment.
- Collaborating with cross-functional teams to define system requirements.
- Reviewing code and enforcing best practices and security standards.
- Evaluating and integrating new blockchain technologies and tools.
- Troubleshooting and resolving complex blockchain-related issues.
- Communicating technical decisions and project status to stakeholders.

Lead Blockchain Developer Requirements:

- A bachelor's degree in computer science, software engineering, or a related field.
- 6 to 10+ years of experience in blockchain development or related roles with leadership experience.
- Strong expertise in blockchain platforms such as Ethereum, Hyperledger, or similar.
- Advanced experience with smart contract development using Solidity or similar languages.
- Strong understanding of distributed systems, cryptography, and decentralized architectures.
- Proficiency in programming languages such as JavaScript, Python, or C++.
- Experience with blockchain security, audits, and risk management.
- Familiarity with version control systems such as Git.
- Excellent leadership, communication, and decision-making skills.
- Strong analytical and problem-solving abilities.
