

Lead Security Engineer Job Description

We are looking for a highly experienced and strategic lead security engineer who, along with our engineering and IT teams, will be responsible for leading the design, implementation, and management of security systems and strategies. Duties will include but are not limited to defining security architecture, guiding security initiatives, and ensuring robust protection of applications, networks, and infrastructure. You will collaborate with developers, DevOps teams, and stakeholders to align security practices with business and technical goals.

A bachelor's degree in computer science, information security, information technology, or a related field is required. Candidates should have 6 to 10+ years of experience in cybersecurity, security engineering, or related roles, including leadership experience.

Lead Security Engineer Responsibilities:

- Leading the design and implementation of security architecture across systems and infrastructure.
- Defining security strategies, policies, and best practices.
- Managing and mentoring security engineering teams.
- Overseeing vulnerability management, penetration testing, and risk mitigation efforts.
- Integrating security into development pipelines (DevSecOps).
- Collaborating with development and DevOps teams to ensure secure system design.
- Ensuring compliance with security standards and regulatory requirements.
- Monitoring and responding to advanced security threats and incidents.
- Evaluating and implementing advanced security tools and technologies.
- Communicating risks, strategies, and security posture to stakeholders.

Lead Security Engineer Requirements:

- A bachelor's degree in computer science, information security, information technology, or a related field.
- 6 to 10+ years of experience in cybersecurity, security engineering, or related roles with leadership experience.
- Strong expertise in network security, firewalls, and intrusion detection/prevention systems.
- Advanced experience with security tools such as SIEM platforms, vulnerability scanners, and endpoint protection tools.
- Strong understanding of secure architecture and application security.
- Experience with DevSecOps practices and CI/CD pipelines.
- Familiarity with cloud security and distributed systems.
- Proficiency in scripting or programming languages such as Python, Bash, or Java.
- Excellent leadership, communication, and decision-making skills.
- Strong analytical and problem-solving abilities.
