

Lead Software Engineer Job Description

We are looking for a highly experienced and strategic lead software engineer who, along with our engineering leadership team, will be responsible for overseeing the design, development, and delivery of complex software systems. Duties will include but are not limited to leading technical teams, defining system architecture, and ensuring high-quality and scalable software solutions. You will collaborate closely with stakeholders, product managers, and cross-functional teams to align technical strategies with business objectives.

A bachelor's degree in computer science, software engineering, or a related field is required. Candidates should have 7 to 10+ years of experience in software engineering, including leadership responsibilities.

Lead Software Engineer Responsibilities:

- Leading the design, development, and delivery of large-scale software systems.
- Defining and guiding system architecture and technical strategy.
- Managing and mentoring software engineering teams.
- Ensuring code quality, best practices, and adherence to development standards.
- Collaborating with product managers and stakeholders to define technical requirements.
- Overseeing the software development lifecycle and ensuring timely delivery.
- Making high-level technical decisions and resolving complex system challenges.
- Driving performance optimization, scalability, and system reliability.
- Coordinating cross-team efforts and improving engineering processes.
- Evaluating and integrating new technologies and tools.

Lead Software Engineer Requirements:

- A bachelor's degree in computer science, software engineering, or a related field.
- 7 to 10+ years of experience in software engineering with leadership experience.
- Strong expertise in programming languages such as Python, Java, or C++.
- Advanced knowledge of system design, architecture, and scalable systems.
- Experience leading engineering teams and managing projects.
- Proficiency with version control systems such as Git.
- Strong experience with databases, SQL, and system optimization.
- Experience with Agile or Scrum methodologies.
- Excellent leadership, communication, and decision-making skills.
- Strong problem-solving and analytical thinking abilities.
- Ability to align technical solutions with business goals.
