

Media Systems Engineer Job Description

We are looking for a skilled and detail-oriented Media Systems Engineer who will be responsible for designing, developing, and maintaining media systems and infrastructure for digital content delivery. You will work closely with developers, designers, and content teams to ensure high-performance media processing, storage, and streaming solutions.

A bachelor's degree in computer science, software engineering, multimedia systems, or a related field is preferred. Candidates should have 2 to 5 years of experience in media systems, software engineering, or related roles.

Media Systems Engineer Responsibilities:

- Designing and developing media processing and delivery systems.
- Building and maintaining infrastructure for video, audio, and multimedia content.
- Collaborating with developers and designers to integrate media systems into applications.
- Implementing streaming, encoding, and decoding solutions.
- Optimizing media performance, storage, and bandwidth usage.
- Troubleshooting and resolving system and performance issues.
- Ensuring system scalability, reliability, and security.
- Managing media pipelines and workflows.
- Conducting testing and improving system efficiency.
- Staying updated with the latest media technologies and standards.

Media Systems Engineer Requirements:

- A bachelor's degree in computer science, software engineering, multimedia systems, or a related field (preferred).
- 2 to 5 years of experience in media systems or software engineering.
- Strong understanding of media processing, encoding, and streaming technologies.
- Experience with multimedia frameworks such as FFmpeg or GStreamer.
- Knowledge of networking and content delivery systems (CDNs).
- Proficiency in programming languages such as Python, C++, or Java.
- Understanding of cloud platforms and media infrastructure.
- Strong problem-solving and analytical skills.
- Good communication and teamwork abilities.
- Ability to manage complex systems and workflows.
