

Payment Systems Architect Job Description

We are looking for a highly experienced and strategic payment systems architect who, along with our engineering and finance teams, will be responsible for designing and overseeing large-scale payment systems and financial infrastructure. Duties will include but are not limited to defining system architecture, ensuring secure and scalable transaction processing, and integrating payment technologies. You will collaborate with stakeholders, product teams, and engineers to deliver robust and compliant payment solutions.

A bachelor's degree in computer science, software engineering, finance, or a related field is required. Candidates should have 7 to 12+ years of experience in software engineering, FinTech, or payment systems architecture.

Payment Systems Architect Responsibilities:

- Designing and overseeing architecture for large-scale payment systems.
- Defining technical strategies for secure and scalable transaction processing.
- Integrating payment gateways, APIs, and financial platforms.
- Ensuring compliance with financial regulations and industry standards (e.g., PCI DSS).
- Collaborating with engineering and product teams to define system requirements.
- Optimizing system performance, reliability, and scalability.
- Implementing security measures such as encryption, fraud detection, and risk controls.
- Reviewing system designs and enforcing best practices.
- Troubleshooting complex system and transaction issues.
- Staying updated with emerging payment technologies and financial trends.

Payment Systems Architect Requirements:

- A bachelor's degree in computer science, software engineering, finance, or a related field.
- 7 to 12+ years of experience in software engineering, FinTech, or payment systems architecture.
- Strong expertise in distributed systems, microservices, and system design.
- Experience with payment gateways, APIs, and transaction processing systems.
- Deep understanding of financial systems, payment flows, and risk management.
- Knowledge of security standards such as PCI DSS and encryption practices.
- Proficiency in programming languages such as Java, Python, or C++.
- Experience with cloud platforms and scalable architectures.
- Strong analytical and problem-solving skills.
- Excellent communication and leadership abilities.
