

Reinforcement Learning Engineer Job Description

We are looking for a skilled and innovative Reinforcement Learning Engineer who will be responsible for designing, developing, and deploying reinforcement learning models and algorithms. You will work on complex decision-making systems and collaborate with teams to build intelligent agents for real-world applications.

A bachelor's degree in computer science, artificial intelligence, data science, or a related field is required. Candidates should have 2 to 5 years of experience in machine learning, reinforcement learning, or related roles.

Reinforcement Learning Engineer Responsibilities:

- Designing and implementing reinforcement learning algorithms and models.
- Developing intelligent agents for decision-making and control tasks.
- Working with simulation environments and real-world data.
- Training and evaluating models using RL techniques.
- Collaborating with cross-functional teams to integrate RL solutions.
- Optimizing model performance and convergence.
- Implementing reward functions and policy optimization strategies.
- Debugging and improving RL systems.
- Documenting experiments, models, and results.
- Staying updated with advancements in reinforcement learning and AI.

Reinforcement Learning Engineer Requirements:

- A bachelor's degree in computer science, artificial intelligence, data science, or a related field.
- 2 to 5 years of experience in machine learning or reinforcement learning.
- Strong proficiency in Python.
- Experience with RL frameworks such as OpenAI Gym, Stable-Baselines, or RLlib.
- Understanding of deep learning and neural networks.
- Knowledge of optimization techniques and algorithms.
- Experience with simulation environments.
- Strong problem-solving and analytical skills.
- Good communication and teamwork abilities.
- Ability to work on complex decision-making systems.
