

Robotics Engineer Job Description

We are looking for a skilled and innovative Robotics Engineer who will be responsible for designing, building, and maintaining robotic systems and applications. You will work with hardware and software components to develop intelligent systems used in automation, control, and real-world problem solving.

A bachelor's degree in robotics, computer engineering, electrical engineering, mechanical engineering, or a related field is required. Candidates should have 2 to 5 years of experience in robotics, automation, or related roles.

Robotics Engineer Responsibilities:

- Designing and developing robotic systems and components.
- Programming robots and control systems.
- Integrating sensors, actuators, and hardware components.
- Developing algorithms for motion planning and control.
- Collaborating with cross-functional teams to build robotic solutions.
- Testing and debugging robotic systems.
- Optimizing system performance and reliability.
- Documenting designs, code, and system architecture.
- Ensuring safety and compliance with engineering standards.
- Staying updated with advancements in robotics and automation.

Robotics Engineer Requirements:

- A bachelor's degree in robotics, computer engineering, electrical engineering, mechanical engineering, or a related field.
- 2 to 5 years of experience in robotics or automation.
- Proficiency in programming languages such as Python or C++.
- Experience with robotics frameworks such as ROS (Robot Operating System).
- Knowledge of control systems, kinematics, and sensors.
- Familiarity with embedded systems and hardware integration.
- Strong problem-solving and analytical skills.
- Good communication and teamwork abilities.
- Experience with simulation tools is a plus.
- Ability to work on real-world engineering challenges.
