

Senior Big Data Engineer Job Description

We are looking for a highly skilled Senior Big Data Engineer who will be responsible for designing, optimizing, and maintaining large-scale data processing systems. You will work on complex data architectures, improve system performance, and collaborate with cross-functional teams to deliver reliable and scalable data solutions.

A bachelor's degree in computer science, data engineering, data science, or a related field is required. Candidates should have 4 to 7 years of experience in data engineering, big data, or related roles.

Senior Big Data Engineer Responsibilities:

- Designing and implementing scalable big data architectures and pipelines.
- Processing and managing large-scale structured and unstructured datasets.
- Optimizing data workflows for performance, reliability, and scalability.
- Collaborating with data scientists and engineers to support analytics and ML models.
- Integrating data from multiple sources into centralized systems.
- Ensuring data quality, security, and governance.
- Monitoring and troubleshooting data systems and pipelines.
- Implementing advanced data storage solutions such as data lakes and warehouses.
- Automating ETL processes and data workflows.
- Staying updated with advancements in big data technologies and tools.

Senior Big Data Engineer Requirements:

- A bachelor's degree in computer science, data engineering, data science, or a related field.
- 4 to 7 years of experience in data engineering or big data technologies.
- Strong proficiency in Python, Java, or Scala.
- Experience with big data frameworks such as Hadoop, Spark, or Kafka.
- Advanced knowledge of databases, data warehouses, and ETL processes.
- Experience with cloud platforms and distributed systems.
- Strong problem-solving and analytical skills.
- Excellent communication and teamwork abilities.
- Experience with workflow orchestration tools.
- Ability to design and optimize large-scale data systems.
