

Senior Software Engineer Job Description

We are looking for an experienced and highly skilled senior software engineer who, along with our engineering team, will be responsible for leading the design, development, and optimization of complex software systems. Duties will include but are not limited to architecting scalable solutions, mentoring junior engineers, and ensuring high-quality software delivery. You will collaborate with cross-functional teams and stakeholders to drive technical decisions and deliver robust and efficient systems.

A bachelor's degree in computer science, software engineering, or a related field is required. Candidates should have 5 to 8+ years of experience in software engineering or a related field.

Senior Software Engineer Responsibilities:

- Designing, developing, and maintaining large-scale and high-performance software systems.
- Leading system architecture and technical design decisions.
- Writing clean, efficient, and scalable code using programming languages such as Python, Java, or C++.
- Reviewing code and ensuring adherence to best practices and coding standards.
- Mentoring and guiding junior and mid-level engineers.
- Collaborating with cross-functional teams to define system requirements and deliver solutions.
- Optimizing application performance and ensuring system scalability and reliability.
- Managing and improving the software development lifecycle.
- Integrating complex APIs and third-party services.
- Troubleshooting and resolving critical technical issues.

Senior Software Engineer Requirements:

- A bachelor's degree in computer science, software engineering, or a related field.
- 5 to 8+ years of experience in software engineering or related roles.
- Strong expertise in programming languages such as Python, Java, or C++.
- Advanced understanding of data structures, algorithms, and system design.
- Experience with software architecture and scalable system design.
- Proficiency with version control systems such as Git.
- Strong experience with databases, SQL, and system optimization.
- Experience with Agile or Scrum development methodologies.
- Excellent problem-solving and analytical thinking skills.
- Strong leadership, mentoring, and communication skills.
- Ability to manage complex projects and make technical decisions.
