

Systems Architect Job Description

We are looking for a highly experienced and strategic systems architect who, along with our engineering and infrastructure teams, will be responsible for designing and overseeing complex system architectures. Duties will include but are not limited to defining system structures, ensuring scalability and reliability, and aligning technical solutions with organizational needs. You will collaborate with stakeholders, engineers, and IT teams to build robust and efficient system architectures.

A bachelor's degree in computer science, information systems, software engineering, or a related field is required. Candidates should have 7 to 10+ years of experience in system architecture, software engineering, or infrastructure-related roles.

Systems Architect Responsibilities:

- Designing and defining large-scale system architectures and infrastructure solutions.
- Evaluating system requirements and translating them into technical designs.
- Ensuring system scalability, reliability, performance, and security.
- Collaborating with development, operations, and IT teams to implement architectural solutions.
- Selecting appropriate technologies, platforms, and frameworks.
- Reviewing system designs and ensuring adherence to architectural standards.
- Identifying and mitigating technical risks.
- Guiding the integration of systems, services, and third-party solutions.
- Maintaining architectural documentation and system blueprints.
- Monitoring and improving system performance and efficiency.

Systems Architect Requirements:

- A bachelor's degree in computer science, information systems, software engineering, or a related field.
- 7 to 10+ years of experience in system architecture, software engineering, or infrastructure roles.
- Strong expertise in programming languages such as Python, Java, or C++.
- Advanced knowledge of system design, distributed systems, and cloud architectures.
- Experience with cloud platforms such as AWS, Azure, or Google Cloud.
- Strong understanding of networking, databases, and system integration.
- Proficiency with version control systems such as Git.
- Experience with DevOps practices and tools is a plus.
- Strong analytical and problem-solving skills.
- Excellent communication and technical leadership abilities.
- Ability to align technical solutions with business and operational goals.
